26961 Cimarron Canyon Drive
Moreno Valley 92555

I am against the World Logistics Center Project in our city. This project will have health effects from the diesel particulate pollution caused by the trucks that will come from the 41 million square feet of warehousing project. The beautiful majestic mountains that surround our city will keep the pollution trapped here.

I moved to Moreno Valley in 2001. I was told by my fellow citizens that the far eastside of the city near Mystic Lake would have a housing development called Valley Highlands according to the General Plan. I love the scenic beauty of this part of Moreno Valley. It appears that the World Logistics Center Project is incompatible with the current general plan. I would not have bought a home in this part of Moreno Valley if I knew the general plan was going to be changed without having a new general plan. Does the city plan to promote a sense of pride in the community when the people have been deceived? How are the residents going to fill a sense of community when they know the city's plans are for warehouses.

Furthermore if the city was concerned about the welfare of its citizens and their children, they would have developed the appropriate infrastructure (rail and airport) to accommodate a large volume of goods that would need to be moved to and from the warehouse. Rail development through the canyon would have mitigated the pollution and traffic that trucks will cause. The narrow 60 freeway cannot accommodate the commuter traffic that goes through this area every day. There are times in the day that you can walk because cars have come to a complete stop. Trucks will make this freeway a trap.

Also, the promises of jobs are false. The developer has been in the city since 19

time period. He had promised 30, 000 to 50,000 jobs from Moreno International Center, a project that include a 10, 000 foot runway. This project did not happen in addition, the previous project from this developer which is Sketchers promised but the building was only designed for 300 because it is so modern and electro advanced. How can the City or the developer properly estimate the number of jobs? can the residents trust the City or the developer when they continue to falsify employment numbers?
