To whom it may concern:

I am a homeowner on the east side of Moreno Valley and have reviewed the Draft Environmental Impact Report with regard to the proposed World Logistics Center. I believe this project to have insurmountable consequences to our region if approved.

The Health impact, traffic impact, infrastructure impact and loss of economic base to the community does not warrant the approval of such a project. This scope development should be deemed unlawful to be situated near residential communities that could eventually be burdened by the ongoing significances that the project is proposing.

It is my opinion that not enough due diligence has been practiced by our local government to make an educated decision on the magnitude of such a project. If they have made a decision, is there proof of their deliberations and what supporting documents will they provide? Do they have full awareness and acceptance of the consequences of their decision? In the justice system does it give a City Council permission to cause direct and indirect physical harm to the citizens due to their decision before their actions become final?

Also, with the DEIR presenting the significant impacts with no mitigation to reduce the impact, where is the protection by our City Council to the community to protect it from a sort of demise on every impact level?

To approve this project shows such lack of consideration for the protection of citizens.

what charges could this government be held accountable for? There is not enough or ongoing proof of employment to warrant this kind of disregard for the imperious consequences.

There will be thousands of residents directly in harm's way due to every significant this project promises. What will be the City Council's retribution to the citizens of the region with the quality of life willfully being revoked by them due to their decision? This project not only brings health consequences, infrastructure deterioration that our community cannot afford but what about the blighting of our communities and the theft by our City Council of the property owners' value and equity of their real estate?

Our elected officials have an amazing opportunity to pay close attention to the needs of our city like Temecula, Riverside, Corona, Rancho Cucamonga just to name a few, that could be a model for us. We are at a pivotal moment in our city's history to make decisions that lay the groundwork for impressive financial rewards that could last for many generations to come. Our city needs to create jobs and housing for the thousands of people that will be needed to support the medical corridor. Give us the green light to build more housing and parks to house the high wage earners that the medical corridor will attract. Give us the green light to bring high wage earners such as medical professionals, engineers, lawyers, and other high end business components that come to Moreno Valley to do their business here instead of having to travel to outlying cities because we do not have those key components here. This is an opportunity to bring a stable tax base business to our city and be creating a livable community for all.

I oppose this project and any decision to approve such a horrific development in our community! There are no acceptable overriding considerations that could justify this project as proposed!
