**Subject:** Official Comments for the DEIR for the "WLC."

**Attachment(s):** 0

Dear Mr. Gross,

I am a concerned resident of Moreno Valley (Rancho Belago) district 5, and I'm v  
"Opposition Of the WLC project.

My home is less than 500 ft. adjacent to Redlands blvd. and Dracaea Ave.

I want to know how you can ignore the "significant cancer risk increases from d  
exhaust, " the engines emit a complex mixture  
of pollutants, composed of gaseous and solid material.also known as particula  
PM.

Deisal trucks also contribute to California's fine particulate matter (PM2.5) air q  
problems. The most vulnerable are children as well as the elderly who have thei  
problems. A report written by Caif. Air Resources Board (CARB) and peer review  
EPA, that (PM2.5) causes 9,200 premature deaths in California each year.

Particulate pollution is categorized into 3 main sizes, PM10 measures up to 10  
diameter and appears as black dust or soot.PM2.5 measures 2.5 microns or sm  
diameter and PM0,1 (ultra fines) make up more than 90% of deisal particulates.  
the size the greater the health risk. It's very discouraging to have read that thes  
particles are not regulated by law are not considered in the EIR being conducte  
Are the residents located where the Deisal trucks will be traveling along Cactus  
of these hazards? There are a multitude of neighborhoods as well as two eleme  
schools, and Hospitals along this route, that will be Impacted by Dirty Deadly D  
I'm sure that the six feet soundwalls being built around those areas, will not pro  
everyone will be breathing?

Never mind the financial burden of Cancer Treatment, who will be responsible f  
up future bills from residents being affected by these Warehouses and the haze  
quality, Itto Benzeevi or the City Council of Moreno Valley?

And what about the Workers who will be employed by these Manufactures, wha  
their rights as to the air they breathe?

Who will be taking care of their medical costs, when their bodies start developir  
issues from the Hazerdous enviroment  
their working in?

My convictions tell me "To Whom Much Is Given Much Is Required."

I challenge you to stick to "The General Plan," 700 houses, and Small Business F

residents are encouraged to open their own business, instead of commuting! I r  
would entail 21,000 jobs, where WLC would only promise 20,000 jobs?  
The Future is'nt in "200, 000 square feet of warehouses? It's in a city that has b  
sustaining and encouraging the farmers, and  
the 7-residents, instead of buying them out or better yet forcing them out with  
project. I encourage you to way all options of  
Community Developement (land use); Circulation; Parks, Recreation, and Open :  
Safety; Conservation; and the General Plan Goals and Objectives. A suggestion  
The Riverwalk Developement," located in the "La Sierra," area adjacent to 91 fre

Sincerely  
Shelly Mesa
